INTRODUCTION

This publication is the fifth edition of industrial and occupational projections using the census matrix-based methodology developed by the U.S. Department of Labor, Bureau of Labor Statistics. The major basis used in developing the 1985 occupational projection is prior year trends of nonagriculture wage and salary industry employment. These industry employment figures were processed through linear regression, multiple regression and shift and share analysis to forecast the 1985 employment. Areas such as the energy related industries needed further consideration in their expansion forecast, due to more recent industry developments. The total number of jobs by industry is converted to occupational estimates via the census matrix based on the Bureau of Labor Statistics publication "Tomorrow's Manpower Needs". The final step involves estimating job vacancies due to growth and replacement during the projection period. The number of job vacancies due to growth is the difference between 1976 and 1985 levels of employment for each occupation. The replacement rate, which is the measure of job vacancies due to death, retirement, or withdrawal from the labor force, is developed using census information on the Age-Sex composition of employment in each occupation for each state.

In the future an expanded Industry-Occupation Matrix will result from the Occupational Employment Statistics survey operations and will be used to provide information regarding occupational needs.

It has become mandatory that education and training be made relevant to the real world and it is hoped that these projects of future occupational needs will be useful in meeting the requirements of those involved in planning career guidance and training programs. Despite the limitations that these projections share with any economic forecast, long-term manpower projections can serve to give an orientation or perspective on the number and kinds of skills that public and private employers will require in the future.

INDUSTRY EMPLOYMENT: 1985

		· .
		•

MINING

Energy development of Montana's coal, gas, and oil resources will add a significant number of jobs in this area. As increased pressure to become energy self-sufficient is felt so should jobs increase as is seen in a three-hundred-twenty percent increase in coal and a sixty-five percent increase in oil and gas. The current import related slow downs in the metallic mining industry seems to have leveled off. Mining has been important in both the political and industrial development of Montana, and will remain so and even have some influence on national politics with regards to energy. Employment levels in 1976 were estimated at 6,630 and showed a significant increase of sixty-two percent to 10,710 by 1985.

CONTRACT CONSTRUCTION

The demand for new housing and energy related large scale projects such as Colstrip #3 and #4 will keep employment opportunities in this area expanding. Construction employment is subject to extreme seasonal fluctuations so it may vary greatly throughout the year. Employment is projected to be 34,722 by 1985, a fifty percent increase over the 1976 figure at 23,136.

MANUFACTURING

Manufacturing represents a small percent of total employment and shows a moderate growth at twenty-two percent from 1976 to 1985. The majority of manufacturing employment is in lumber and woods, food products, and primary metals. The thirty-one percent growth in lumber and woods can be directly related to demand for housing. Foreign competition will still affect primary metals but it will show some gains over 1976 figures. Durable goods will account for 20,489 and non-durable 9,922 by 1985.

TRANSPORTATION, COMMUNICATIONS, AND PUBLIC UTILITIES

All areas in this division will experience growth during this time. Transportation shows growth in railroads and local transit. As petroleum costs rise the importance of mass transit and rail shipping will increase and employment will likewise increase. The sixty-nine percent increase in communications and public utilities will add about 5,800 jobs in this area. The greatest single cause can be attributed to energy development.

WHOLESALE AND RETAIL TRADE

An increase of 25,000 workers should occur in wholesale and retail trade, Montana's second largest division. Wholesale accounts for seventeen percent and will experience a twenty-eight percent increase between 1976 and 1985. Retail is eighty-three percent and will grow thirty-four percent in this time. Eating and drinking establishments, auto dealers, gas stations, and general merchandise will employ the largest portions of this industry. Employment opportunities should remain high in this area.

FINANCE, INSURANCE, AND REAL ESTATE

This industry is influenced mostly by population and the effect of population growth is readily seen in the forty-five percent increase experienced in finance, insurance, and real estate. This will account for an increase of 5,500 new jobs.

SERVICES

Montana's largest division will provide jobs for 130,008 workers in 1985. This forty percent increase adds 37,045 jobs to the 1976 level. The

SERVICES (Cont.)

industries in this sector are hotels and lodging, personal services, business services, auto repair, entertainment, medical, legal, educational, museums, nonprofit and miscellaneous services. Growth will be experienced in all segments at this division. Increased population growth and greater societal demand will be the cause for this growth.

PUBLIC ADMINISTRATION

This division accounts for only those jobs which cannot be classified in any other industrial classification. It is expected to grow twenty-seven percent to 22,625 jobs by 1985. The majority of this growth will be at the state and local level.

EMPLOYMENT BY OCCUPATION: 1985

MONTANA EMPLOYMENT BY OCCUPATION 1976-1985

Total annual average job openings in Montana are estimated at 23,700 over the study period. Openings due to growth consist of 48% or 11,400 of the total; thus for every 100 new jobs created by industry growth there will be about 104 openings due to separations. Montana's total employment from 1976 through 1985 is projected to increase at an average rate of 3.6% which compares to 2.9% for the U.S. With the self employed, unpaid family workers and farm workers remaining relatively unchanged during the 1976-1985 period, nonagricultural wage and salary workers will make up the bulk of the growth. Nonagricultural wage and salary employment increase for the past four years were as follows: 1976 - 12,900, 1977 - 16,600, 1978 - 12,600 and 1979 - 4,600. The four year average of 11,600 is not strictly comparable to the projected 1976-1985 annual average of 11,400, but indicates the growth is occuring as estimated.

In grouping occupations into type of worker, the white-collar workers trend dominates the relative increase in employment. Employment of service workers is also growing at a significant rate. The rapid growth of white-collar and service workers reflects a technically oriented economy and the continued expansion of service producing industries which employ a large number of these workers. Blue-collar workers experienced a decline in relative distribution from 1960 to 1970, but the current expansion in energy related industries has been a major reason for blue-collar employment growth to become as strong as the other two groups. The farm sector of occupations has been experiencing a decline in the number employed, but the 1976-1985 period anticipates stabilization in employment. Since the other type of workers will continue to increase, farmers and farm workers relative distribution will still continue to decline each year.

PROFESSIONAL, TECHNICAL, AND KINDRED WORKERS

Professional occupations deal with theoretical or practical aspects of such fields as science, engineering, technical work, art, education, medicine, law, and business relations. Most of these occupations require substantial educational preparation, usually at the university level. Technical positions require knowledge of scientific, engineering, mathematical, computer programming, and draft design principles acquired by training through technical institutions, junior colleges, post-high school courses, on-the-job training or experience.

PROFESSIONAL, TECHNICAL, AND KINDRED WORKERS (Cont.)

The number of job openings in this group is projected to increase at an annual average of 3,300 with 54% of those jobs being expansion positions. These jobs should account for 13.9% of total job openings through 1985. The annual average growth rate for professional, technical and kindred workers is 3.8%.

The occupation with the highest job needs in this group is elementary school teachers, however, in recent years there has been a state—wide surplus of people with teaching degrees. Other professional, technical and kindred occupations with relatively large job needs are professional nurse, secondary school teachers, accountants and clergy.

MANAGERS AND OFFICIALS

The managers and officials occupational group includes persons concerned with policy making, planning, organizing, staffing, directing and/or controlling activities that are common to many types of organizations as well as activities that require a knowledge of management and operation of a given organization. Employers increasingly require beginning managers to have a college degree. A bachelor's degree in business administration with a major in accounting, economics, or finance is desired by some employers. Other firms seek applicants having technical training in engineering, science, or mathematics. Still others train liberal arts graduates on the job. Advancement to a high-level management job often occurs after several years of progressively more responsible work experience.

Employment in this group will increase by 14,120 from 1976 through 1985, which amounts to an annual average of 3.8%. The number of jobs opening each year is estimated at 3,400 with 46% coming from opening due to growth. The average growth rate for managers and officials is 3.8%.

The occupation in this group with the highest job needs is bank and financial managers with 232 openings yearly. Because managers are employed in a broad range of settings, it is difficult to pinpoint specific occupations that will be in demand; therefore, a relatively high number of yearly job openings (1,891) are found in the classification of all other managers.

SALES WORKERS

Included in this major occupational group are occupations which are concerned with selling goods and/or services. The minumum educational requirements for sales careers vary widely. Some sales positions require no formal education, others specify a college degree in a technical or scientific field. Even for routine sales jobs, however, a high school diploma is an asset for the beginner. Training for some sales jobs, such as those in retail stores, is usually received on the job. Some persons combine on-the-job training with home study or courses offered by manufacturers or local educational institutions.

Sales workers represent the smallest number of yearly employment openings, (1,270), and the lowest annual growth rate, (3.4%), for white-collar workers. Also, the expansion of jobs involve only 45% the annual openings, which is the lowest expansion portion of all the major occupational groups.

The job with the highest projected needs is other sales workers with 882 openings yearly through 1985, which is a 69% total of the sales workers. The next highest job needs occur in real estate agents.

CLERICAL WORKERS

Included in this occupational group are clerical personnel whose work involves preparing, transcribing, transferring, systematizing, and preserving communications and records; collating accounts; and distributing information. Also included are clerical workers involved in planning, coordinating or expediting production and the flow of work and workers involved in the clerical aspects of receiving, storing, issuing or shipping of materials, merchandise, supplies, or equipment. All but the most routine clerical positions require graduation from high school. Most employers regard instruction in business subjects as particularly good qualifications.

Employment in this occupation group is projected to increase at an annual average rate of 4.5%. The number of yearly openings amount to 3,780 with 53% being expansion jobs.

From this group, the occupation with the highest annual job needs are secretaries with 870 openings yearly. Other occupations with high demands are bookkeepers, miscellaneous clerical workers, and teachers aides.

CRAFTS AND KINDRED WORKERS

This group of skilled workers include those involved in construction, metal-working, printing, transportation, public utilities, and other crafts and kindred work. Also included are mechanics, repairers, and installers. A large portion of the workers learn their trades informally on the job or through planned apprenticeship training. Others learn a skilled trade in vocational, trade, or technical schools. Training and experience in the Armed Forces may be an asset in many of these jobs. A high school education is always helpful and is required by some employers. Also, a high degree of aptitude is most desirable.

Openings due to growth comprise 59% of the 3,060 yearly average openings for this group. Employment in this group is projected to increase 4.6% yearly from 1976 through 1985.

Occupations with high demand include carpenters, electricians, plumbers, auto mechanics, and heavy equipment mechanics.

OPERATIVES

This group of workers is classified as semiskilled. Most of them may operate some type of machinery, equipment, or tool in performing their jobs while others perform tasks requiring use of the hands only. These workers ordinarily receive only brief on-the-job training. The simplest repetitive and routine semiskilled jobs can be learned in a day and mastered in a week. Even those jobs that require a higher degree of skill can be learned in a few months. The ability to learn new jobs quickly, however, is an important qualification for semiskilled workers.

Although employment in this category is expected to increase by 8,940 between 1976 and 1985, the average rate of increase of 3.1% is the lowest of the occupation groups except for farmers. The number of annual job openings is projected at 1,830 yearly for the 1976-1985 period, with 54% of the jobs being expansion positions.

The occupation with the highest demand from this group is truck drivers. Also high in demand are welders, garage workers, mine operatives, sawyers, delivery and route workers.

LABORERS, EXCEPT FARM

These workers are found in practically all types of nonagricultural industries. For example, they may be in construction, in handling freight and materials, in collecting garbage, in gardening, in cutting timber, in filling orders, in stocking merchandise, or in assisting in the trades.

LABORERS, EXCEPT FARM

Much of the work that nonfarm laborers perform involves tasks that require little special training. Brief instruction and a few hours of on-the-job training usually are sufficient preparation for a job as a nonfarm laborer.

Laborers, the smallest occupational group, is projected to have one of the smaller increases in the annual average employment rates at 3.2%. Also the number of yearly openings will be a low 950 jobs which will be 48% openings due to growth.

Some labor occupations with relatively high demand are construction laborer, freight and material handlers, groundkeeper, and stock handlers.

SERVICE WORKERS

The occupational group - service workers - include workers concerned with: cleaning and/or serving food and beverages; performing services that require either direct contact or close association with the individual; or the protection of individuals, or of public or private property. Training and skill requirements differ greatly among the various service occupations. Some must have a college degree, some need specialized vocational training, and others gave no specific educational requirements for entry, although a high school diploma is always an advantage.

Service workers are the largest major occupational group and have a wide variety of jobs and skills. Employment in this category will increase 4.7% each year for the 1976-1985 period. Openings due to growth comprise 48% of the 4,580 yearly openings.

The occupation with the highest demand from this group is cooks with 613 yearly openings. Other high demand jobs are cleaners and janitors, waiters, child care workers, nurses aides and orderlies, and bartenders.

FARMERS AND FARM WORKERS

The declining employment of this occupational group will experience a stabilization in the 1976-1985 period. Some farm laborers jobs will be lost due to declining openings but an equal number of farm manager positions will be created by expansion.

NATIONAL JOB OUTLOOK IN THE 80'S

NATIONAL JOB OUTLOOK IN THE 80's.

Based on the projections of the Occupational Outlook Handbook, 1980-81 edition, employment is expected to increase in almost all occupations. through the 1980's. Between 1978 and 1990, total employment will rise from 94.4 to 114.0 million workers, or an annual average increase of 1.7 percent. In addition to these nearly 20 million new jobs created between 1980 and 1990, about 47 million additional openings are expected to result as people already working leave the labor force because of family duties, retirement, illness, or death.

White-collar occupations include professional, managerial, sales, and clerical jobs. They already account for over half the work force. The rising demand for people to work in environmental protection, energy development, and medicine will increase the need for many types of professional workers. Managers and clerical workers who are employed by all industries will benefit from the growth of the economy as a whole. And the expansion of retail trade will cause increased employment of sales workers. In addition to roughly ll million jobs resulting from employment growth in all these occupations, more than 25 million openings will result from deaths and retirements.

Blue-collar occupations include craft, operative, and labor jobs, which account for about 33 percent of all employment. During the 1980's, their growth will be slower than the average for all occupations, but will still result in 5 million openings, and over 11 million job openings will occur from deaths and retirements. Blue-collar occupations are concentrated in mining, manufacturing, and construction. In these industries the use of new production methods will allow more goods to be produced by fewer workers. Skilled blue-collar workers, such as tool-and-die makers and business machine mechanics, are less likely to be displaced by changes in technology than are unskilled workers and employment in those occupations will grow more rapidly than total blue-collar employment.

Service occupations include jobs in cleaning, food, health, personal, and protective services. They are expected to be the fastest growing group of occupations during the 1980's; but because this group is smaller than the white-collar and blue-collar groups, the total number of jobs becoming available will not be as large. In addition to almost 4 million openings due to employment growth, the service occupations will provide about 8 million openings from death and retirements. A larger population with more money to spend and the expansion of businesses will cause greater demand for many services. The employment of food service workers, for example, is expected to increase as people choose to dine out more often, and employment of protective service workers will increase because businesses want better security systems.

Farm occupations comprise the smallest of the occupational groups. Farm employment is expected to decline through the 1980's. The use of laborsaving equipment and more efficient farming methods will raise productivity enough to decrease the need for farmers and farm workers.

Fastest Growing Jobs, 1978-90 Occupation **Annual openings** Bank Clerks 45.000 Bank officers and 28.000 financial managers 4 200 Business machine repairers City managers 350 Computer service technicians 5.400 2 200 Construction inspectors 11,000 Dental assistants 6.000 Dental hygienists Dining room attendants 37.000 and dishwashers Flight attendants 4 800 70 000 Guards 18,000 Health service administrators Homemaker-home health aides 36.000 58,000 Industrial machinery repairers 1.100 Landscape architects Licensed practical nurses 60.000 Lithographers 2,300 Nursing aides, orderlies. 94.000 and attendants Occupational therapists 2,500 Occupational therapy assistants 1,100 2 700 Physical therapists 600 Podiatrists Respiratory therapy workers 5,000 Speech pathologists and audiologists 3,900 26,000 Teacher aides Travelagents 1,900 Note For these occupations employment in

1990 is projected to be at least 50 percent

higher than it was in 1978.
